## Manlift Operator Certification BC

Manlift Operator Certification BC - Our aerial lift and scissor platform training and certification empowers those participating with a general understanding and knowledge of the safe and efficient utilization of "Power Operated Mobile Work Platforms," under all of the current regulations in the business. Upon successful completion of training, the participants will be able to understand and know specific health and safety related hazards associated with operating scissor and aerial lifts.

There are different affiliated places within your district providing Manlift Operator Certification Programs. Those training are provided with in-depth instruction on safe use and rules together with extensive hands-on training. The knowledge and skill level of each individual training is evaluated and individuals who can demonstrate a satisfactory level of operational ability would receive employee documentation and Operator Certification cards.

Theory Training
The trainer will help the one training through a review of the theory training making use of various visual aids. The one training would work out of a manual which includes all the necessary regulations. Other topics such as safe operating procedures, various equipment kinds in addition to different associated applications and sizes, pre-use inspections and general work place safety are individually explored.

Theory Evaluation
The Theory Evaluation begins with a written exam based upon the concepts included in the operator's reference instruction manual. These tests are graded and returned to the trainees. After that the exams are reviewed to ensure understanding and a score of at least 70 percent is considered necessary so as to pass this portion of the training.

Practical Training
The hands-on part of the course is included in the practical training. Here, those training are shown the safe operating measures, the parking and shutdown procedures and the pre-use inspection procedures. Every one training has the chance to operate the equipment and practice the skills they learned during Theory Training under the program trainer's helpful eye in an environment that is safety controlled.

Practical Evaluation
The evaluation of the practical part is where the one training is assessed as to whether they have the minimum level of skill. Trainees are individually tested on their skills utilizing the machine in a somewhat challenging program environment. As soon as the evaluation is complete, the trainees are de-briefed and given the opportunity to address whichever problems they might have about whichever portion of the program. Each successful trainee's employer will be given the official documents and records shortly after the course has been completed.
