

## Aerial Lift Train the Trainer BC

Aerial Lift Train the Trainer BC - The Aerial Lifts Train the Trainer Certification Program will teach trainers how to effectively train operators in safe industrial mobile machine operation. Trainers are given in-depth instruction about aerial lift machinery. The program is provided on an open enrollment basis and delivered at select training sites. Prior to certification, trainers are evaluated and graded on their understanding and demonstrated skills.

The Aerial Lifts Train the Trainer Certification Program emphasizes practical learning. As the number one training provider in the business, we give the best hands-on training possible through chances to practice techniques and concepts learned inside the classroom. Together with hands-on experience, trainers develop general knowledge of equipment theory and instructional methods, classroom and field communication skills, and ability to efficiently train and assess operators. Trainers will gain knowledge about what traits make an effective trainer.

The Aerial Lift Train the Trainer Certification Program teaches the instructional techniques involved in communicating concepts within a classroom and/or field situation. Knowledge needs a training component to be effectual in workplace environments. There are three factors of machinery operation that the trainer must learn how to convey to operators: what to carry out; how to do it; and the reason why it should be done.

The program offers detailed, up-to-date reference material to be able to help trainers convey the subject matter to equipment operators. Instruction manuals contain detailed information regarding all aspects of industrial mobile machine operator training. Incorporated within the package are training aids that provide a visual reference so as to enhance the learning experience. The equipment-specific training products include essential materials meant for both the trainer and the operator: videos/DVD's, overhead transparencies, kinds of equipment, safety message posters; stability pyramids and digital training aids.
