

Manlift Training BC

Manlift Training BC - Different manlift training programs consist of the content and review of manlift devices. An essential part of the program is the practicum where students demonstrate their practical ability and knowledge to operate the manlift safely. A requirement to Manlift training is the fall protection training, which can be incorporated in the training according to the particular needs of the customer.

Course Content

The program content consists of: the impact of performing unsafe acts or utilizing unsafe machine, pre-shift equipment check and work area survey requirements, Lifting device equipment definitions, Review of load capabilities, safety decals and specific machine requirements, Review of related parts of the CSA Standards and the OHSA Standards and Review site particular Hazards, together with controls for safe utilization of a lifting device.

Demonstration and Evaluation Content

Demonstration and evaluation content comprises: Proper personal protective equipment or P.P.E. as required; Making use of a spotter or a signaler when needed; Utilizing a lift just on level and solid ground; Utilizing a correct fitting harness or fall arrest device; Using the lift with all other workers clear of the job site; Aware of load restrictions etc. and other specs as set out by the manufacturer; Having all associated equipment safely stored on the lift platform; Pre-shift work area survey and machine check; Ensuring a smooth and safe operating speed for different plant conditions and isolating off the work place when major work projects are to be completed.

Each and every individual would be tested to make certain they can efficiently and safely operate your site-specific machine.

Manlift Safety

Manlifts can be very dangerous machines since they are capable of lifting a worker 20' or higher in the air and that creates a particular amount of danger. As the danger is so apparent, lift operators and owners are careful to correctly maintain their machines and follow proper operating procedures and safety precautions. The ratio of accidents involving this particular equipment is rather low.

The safety specifications for boom lifts and scissor lifts puts the burden for safe manlift operation on the user. You are responsible for knowing how to safely use the lift even if you only lease the machinery for a day. The most basic safety features on the machine are the operating guidebook and safety decals. These show vital information regarding the maintenance, operating procedures and safety equipment.

Newer lift models would come along with instruction manuals and decals in place. Technically, the operating handbook should be kept on the lift itself. If you are buying a used lift, it is essential to ensure that the manual is included and that important decals haven't been painted over. The restraints which prevent operators from falling and the guardrails are other vital safety features. These are standard and mandatory on all types of lifts.
