Scissor Lift Training BC - The scissor lift or platform lift, is a mechanical industrial lift that has been adapted to be utilized in retail, wholesale, manufacturing and production environments. Industrial scissor lifts have been used primarily within production and manufacturing facilities for many decades to efficiently elevate and lower supplies, people and other equipment. The scissor lift is a platform with wheels that functions like a lift truck. It is valuable for duties that require the mobility and speed of transporting individuals and material into the air.

When extended, the scissor lift can range 6.4 to 18.8 meters or from 21 to 62 feet above ground. It is unique in the fact that it does not rely on a straight column to elevate its platform, rather folding supports beneath it come together and stretch the platform upwards.
